Ava Cai
Project 2 Portfolio Resource Sheet
October 21, 2026

AI DECLARATION: AI was not used in the creation of this program.

1. https://www.geeksforgeeks.org/machine-learning/ml-cost-function-in-logistic-regression/
    a. From GeeksforGeeks, I learned how to implement the logistic regression cost function in Python, which shows up in my code in lines 55-61 in the `logistic_regression.py` file.
2. https://www.geeksforgeeks.org/machine-learning/understanding-logistic-regression/
    a. From GeeksforGeeks, I learned how to implement the sigmoid function in Python, which shows up in my code in line 55 in the `logistic_regression.py` file. I also learned how in logistic regression you need to compute a linear combination of input features from this source which shows up in my code in lines 45-51 in the `logistic_regression.py` file.
3. https://numpy.org/doc/stable/reference/generated/numpy.matmul.html
    a. From the NumPy documentation, I learned how to use the matrix multiplication operator @, which shows up in my code in line 98 in the `logistic_regression.py` file.
4. https://www.geeksforgeeks.org/python/numpy-linspace/
    a. From GeeksforGeeks, I learned how to use `np.linspace()` to create an even distribution of values for graphing, which shows up in my code in line 56 in the `logistic_regression_testing.py` file.
5. https://scikit-learn.org/stable/auto_examples/linear_model/plot_ard.html
    a. From scikit-learn's Automatic Relevance Determination Regression example, I learned how to discuss a machine learning model using code examples, graphs, and explanations of its results, which shows up in the "Testing and Evaluation" section of my README.
6. https://scikit-learn.org/stable/modules/linear_model.html
    a. From scikit-learn's Linear Models User Guide, I learned how to explain the mathematical concepts behind logistic regression, which shows up in the "How It Works" section of my README.
7. https://scikit-learn.org/stable/modules/generated/sklearn.linear_model.LogisticRegression.html
    a. From scikit-learn's LogisticRegression documentation, I learned how to describe a model's parameters, attributes, and methods, which shows up in the "LogisticRegression Class" section of my README.
8. https://github.com/scikit-learn/scikit-learn/blob/main/README.rst

    a. From scikit-learn's GitHub README, I learned how to structure a project overview, including things like dependencies, which shows up in the "Overview" and "Dependencies" sections of my README.
9. https://www.makeareadme.com/
    a. From the source Make a README, I learned how to organize technical documentation into clear sections, including an overview, dependencies, usage examples, and references, which shows up all throughout my README.
